

1. INSTALLATION INSTRUCTIONS

Prerequisite requirements

PLEASE MAKE SURE YOU VIEW THE TUBE VIDEO here: <https://youtu.be/wWV6wdC0g2A>

Program will only work on MS Windows. It can operate on a desktop or laptop computer or any VPS with the Windows Server operating system. (Note: this program will not work on a MAC operating system, nor on Linux systems.)

Note: If using a VPS ensure you have pre-installed the Google Chrome web browser since VPSs do not generally have this pre-installed. Use the VPS native browser to download/install Chrome.

Both trial version and licensed version of the program is packed as an installer that will automatically create and install the files into the following location **C:/PDQ/PDQ-ATM**

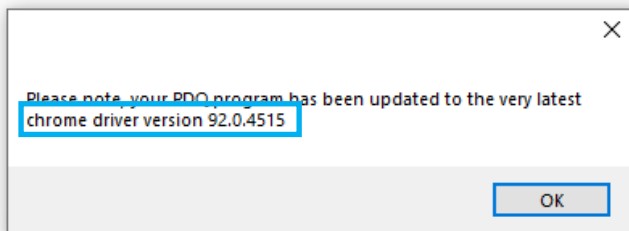

As the program is designed to take control of the browser certain anti-virus software will report false positives that can cause problems with the download and execution of the program (Note: this is generally not an issue on a VPS as there is no antivirus installed.)

If you are having problems downloading or executing the program due to anti-virus software and/or firewall problems, please refer to the section below on **Common Installation Problems**.

2. HOW TO USE THE PDQ-ATM PROGRAM

Synchronisation of the latest Chrome Driver

The first time you use the program it will download the very latest drivers from the Google Chrome website to your installation folder and then present a message showing the current version that will be used by the program.

At this point it may be worth checking that your actual Chrome browser is running the latest driver.

To do this open your chrome browser and in the top right corner select the 3 dots to open the menu drop down and then select the following:

[Help/About Google Chrome](#) - This will then display your current version or will automatically proceed to update your browser to the very latest version.

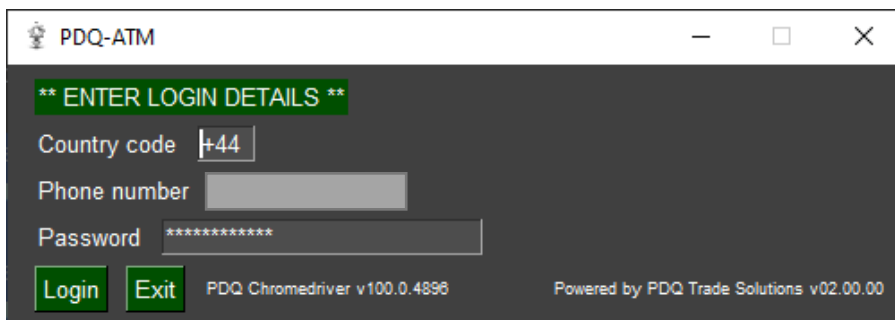

Note: If the program fails to download the latest driver please check your firewall settings to ensure the program has access to the internet.

3. LOGGING INTO YOUR COTPS PLATFORM

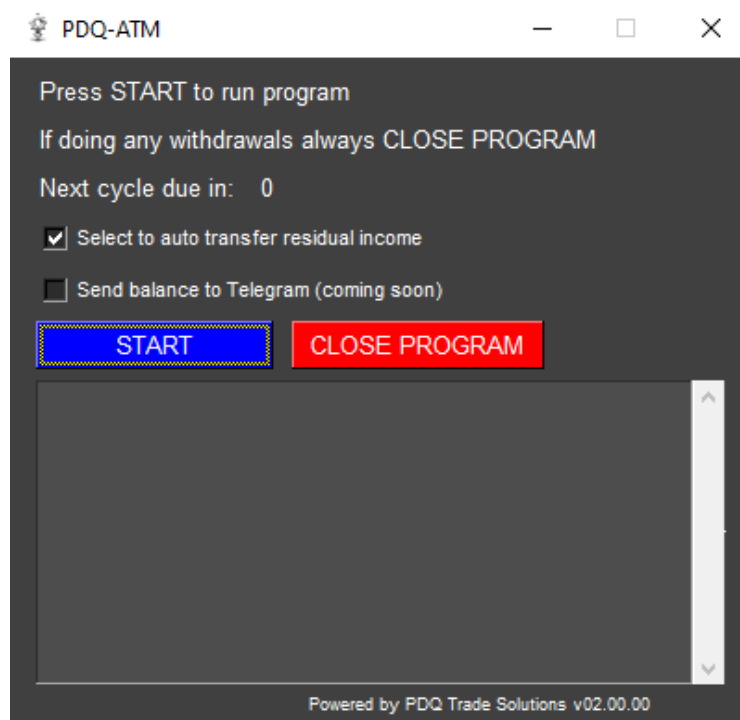

Note: You will need to enter your COTPS login details to allow the program to manage the login to the COTPS website

1. Enter your country code (including + sign) , phone number and password.
2. Select LOGIN – DO NOT use the keyboard or mouse until the program has fully logged into your COTPS website.

Note: PDQ Trade Solutions do not require or need you to send any information regarding your login for the COTPS website. All logins are managed client-side only.

USING THE MAIN PROGRAM INTERFACE

CHECK BOX OPTIONS

Select to auto transfer residual income

When this option is selected any residual income made between each cycle will be automatically transferred to your wallet prior to each cycle.

Note: The setting has been defaulted to ON, if you do not wish to transfer the residual income then un-check the box.

Send new balance to Telegram

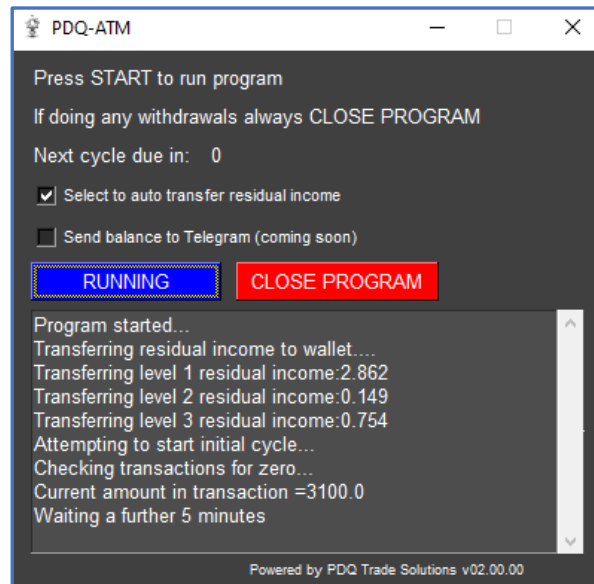

Note: This will be in the next version but will send the total balance and time of last cycle to your personal Telegram channel. This is useful to inform you when the VPS server maybe be down.

4. STARTING THE PROGRAM

To start the program, you must click the START button and the program will display messages to show what stage the program is at during the process.

This program can only be switched off by clicking the CLOSE PROGRAM button that you will need to do prior to making a withdrawal.

You may start the program any time even with money in the transaction folder as the program will then monitor this folder at 5 minute intervals to check when In transaction = 0 (see program progress messages below).

This helps to optimize the wait time ONLY on the initial start cycle as opposed to waiting the standard 2 hours.

If you have selected Auto transfer income this part of the program will commence immediately to check and transfer any residual income to wallet.

It will then check the In Transaction balance and if zero will start to execute the orders until the wallet balance is < 5.

After completing each cycle the program will sleep for approx. 2 hours 5 mins after which the program will wake to repeat the auto transfer and refresh the transaction hall page ever minute until the In Transaction balance = 0, then finally complete the orders until wallet is < 5.

5. COMMON INSTALLATION PROBLEMS (Anti virus – Firewalls)

It is common for some anti-virus software to report false positives when downloading and installing programs in particular where the program is designed to take control of your browser.

Note: This is unlikely when used on a VPS as there is no AV software installed.

If you will be using it on your personal computer, you may have issues caused by your antivirus software and the information provided below provides some guidance and links to other help to get around these issues.

[My anti-virus software is preventing me from downloading the program or deleting the program after it has been downloaded.](#)

The simplest solution is to temporary turn off your anti-virus software and then to complete the download. For example, if using Windows Defender, you should go to:

[Windows Security / Virus & Threat Protection/Virus & Threat Protection Settings / Manage settings](#)

[Temporarily turn off real-time protection. Note: This will turn itself back on after a short period.](#)

Real-time protection

Locates and stops malware from installing or running on your device. You can turn off this setting for a short time before it turns back on automatically.

Once you have turned off the program, download the file and proceed to install the program.

The program will create and install into the folder C:/PDQ/PDQ-ATM/Trial as shown below:

Name	Date modified	Type	Size
backup_settings.ini	02/04/2022 20:52	Configuration sett...	1 KB
chromedriver.exe	02/04/2022 20:52	Application	11,526 KB
config_ini.pkl	01/04/2022 20:07	PKL File	1 KB
error log.txt	29/03/2022 21:17	Text Document	1 KB
PDQ-ATM USER MANUAL V01.pdf	29/03/2022 21:04	PDF File	284 KB
PDQ-ATM USER MANUAL V02.pdf	02/04/2022 17:49	PDF File	296 KB
PDQ-ATM.exe	02/04/2022 17:49	Application	23,355 KB
unins000.dat	02/04/2022 17:50	DAT File	10 KB
unins000.exe	02/04/2022 17:50	Application	2,557 KB

My anti-virus software is preventing me from running the program or deleting the program after activation.

If this occurs go back to Windows Security / Virus & Threat Protection/Virus & Threat Protection Settings.

Scroll down to Exclusions and select Add or remove exclusions:

Exclusions

Windows Defender Antivirus won't scan items that you've excluded.
Excluded items could contain threats that make your device vulnerable.

[Add or remove exclusions](#)

Select Add Exclusion and then navigate to the folder C:/PDQ where PDQ-ATM has been installed to add this folder to the exceptions.

+ Add an exclusion

C:\PDQ
Folder

Note: If the program has been removed by Windows you may repeat the download and re-run the installer program.

If you are using any other 3rd party anti-virus software, try to search using the software name and the words *“how to stop [insert your antivirus software name here] from blocking a program or file”*, or *“how to create an exception using [insert your antivirus software name here]”*.

Below are some useful links to information from some common 3rd party anti-virus software.

Software	Link to assistance
Norton AV	https://support.norton.com/sp/en/uk/home/current/solutions/v80629965
AVG	https://smallbusiness.chron.com/add-exceptions-avg-54277.html
BullGaurd	https://antivirus-scan.co/how-to-unblock-something-on-bullguard

If you require any further assistance, please contact support at admin@pdqtradesolutions.com or contact me directly on my telegram link below, where we will be happy to arrange a remote session via zoom to assist.

6. FAQ

Can I use PDQ-ATM for multiple accounts?

This is still being tested and there will be an update soon.

Getting crashes when in use – ALWAYS ensure your chrome browser is set to 100% zoom

Does the program work on a MAC?

No, the program will only work on Windows with Google Chrome installed. You would need to install a parallel so you can run it on windows 10 (see link below). Optimum solution is to use a VPS with Windows Server installed.

https://www.parallels.com/uk/pd/general/?gclid=Cj0KCQjwvYSEBhDjARIsAJMn0lio3cnJ9n1jcUgKggEk2GJiKcufAscslfXHo4S11idaCoYr2NXUEv4aAhf4EALw_wcB

Will the program still work when the browser is minimized?

Yes, the program will work with browser and the program minimized to the task bar.

Why does the program sometimes stop working?

This can occur due to internet connectivity issues or VPS server issues. Another reason could be the COTPS website not working or running slow due to overload.

Why does the program look like it may have stalled?

Always check the program messages this will alert you to any problems and inform you where the program is currently in the process.
